

PRESS RELEASE

ITA Airways: a video for the Airbus A350 first flight in blue livery

The new Airbus A350 made its first flight in the new Company's colors. A video celebrates ITA Airways new flagship

A sustainable aircraft: lighter, quieter, and more efficient, it delivers 25% less fuel consumption and CO2 emissions per seat - the lowest figures in its category

70% advanced, lighter materials ensure less weight and more range, state-of-the-art aerodynamics deliver further fuel efficiency

From June, the A350 will serve the new intercontinental routes in the 2022 summer season of ITA Airways.

Rome, 21 April 2022 - The new Airbus A350-900 of ITA Airways performed its first flight in the Company's blue livery. The video of the flight that took place at the Airbus headquarters in Toulouse is available at this [LINK](#)

This latest generation aircraft, the A350 will join the ITA Airways fleet in June to serve the new intercontinental routes that the company will open in the 2022 summer season from Rome Fiumicino to Los Angeles, Buenos Aires, Sao Paulo and Tokyo.

The introduction of the Airbus A350 in the ITA Airways fleet represents an important step towards sustainability and is in line with the objectives of the international "Fit for 55" package, whose objectives are shared by ITA Airways.

The arrival of the flagship aircraft will enable the company to offer modern, environment-friendly aircraft featuring cutting-edge technology with the aim of reducing CO₂ emissions by 750,000 tonnes over the 2021-2025 plan timeframe.

During the first flight, the Airbus A350 featuring the new blue livery of ITA Airways flew in cruise to complete the preparatory cycle before its entry into operations.

The Airbus A350 Family is the world's most modern and efficient widebody family and an undisputed long-range leader. It is the lightest, quietest, and most efficient aircraft in its category.

A 70% weight reduction has been achieved courtesy of advanced, lighter materials, while cutting-edge aerodynamics and the world's most efficient large Rolls-Royce aeroengine (the Trent XWB) optimize range and payload for greater efficiency. Thanks to the new aircraft, ITA Airways will benefit from a 25% reduction in fuel consumption and CO₂ emissions per seat compared to previous generation aircraft as well as any other aircraft in its category.

On the A350-900, every detail has been designed with aerodynamic efficiency in mind, from the 3D curved windshield to the way the flaps uniquely deploy along the line of flight. This state-of-the-art, nature-inspired aerodynamics includes a unique wing morphing technology that continuously optimises the wing profile to reduce drag and lower fuel burn.

ITA Airways is proud to add the Airbus A350 to its fleet, an aircraft which will allow the company to further develop its intercontinental network.

About ITA Airways

ITA Airways is a company totally owned by the Italian Ministry of Economy and Finance for the exercise of business in the air transport sector. ITA Airways aims at creating an efficient and innovative air carrier that will become a reference point in providing Italy with quality connectivity both in terms of international destinations, thus boosting tourism and foreign trade, and within the Country, also taking advantage of the train-air integrated mobility. ITA Airways will place the best customer service at the center of its strategy (through a strong digitization of processes that ensure a best-in-class experience and personalized services), combined with sustainability, in its environmental (new green and technologically advanced aircraft, use of sustainable fuels), social (equality and inclusion for a gender-neutral company) and governance (integration of sustainability into internal strategies and processes) aspects. ITA Airways is a member of SkyTeam alliance as of October 2021.
